6000 H. P. DIESEL LOCOMOTIVE

Designed and Built for

LOUISVILLE & NASHVILLE RAILROAD

BY ELECTRO-MOTIVE DIVISION . GENERAL MOTORS . LA GRANGE, ILLINOIS

This General Motors model F3 Diesel locomotive consists of one lead and three booster units, each equipped with one 16-cylinder, V-type, 2-cycle GM Diesel engine having a bore of $8\frac{1}{2}$ ", stroke 10" and a unit fuel injection system. The engines are rated a full 1500 horsepower for propulsion at 800 RPM providing a

engine is directly coupled to a DC-AC generator. Alternating current powers auxiliary equipment. Direct current is fed through control apparatus to the sixteen traction motors—two per truck—geared directly to the driving axles. There are two four-wheel trucks per unit.

SPECIFICATIONS

DIMENSIONS (per unit)

Overall length over couplers, lead unit50'-8"
Overall length over couplers, booster unit50'-0"
Maximum width over grab irons
Maximum height above rail
Distance between truck centers30'-0"
Truck rigid wheel base9'-0"
Wheel diameter40"

SUPPLIES (per unit)

	160		,				
uel oil					 	1200 g	gals.
